APPLICATION ACCEPTED

Notice is hereby given that the person interested in opposing the grant of Patents to any of the applications referred to below at any time within four months from the date of this Gazette may give notice at the Patent Office on the prescribed Form P-7 of the Patents Rules 18(1) of 2003.

The six figures number shown in the right hand side are those given to applications on acceptance of the complete specification under which the specification will be printed and subsequent proceeding taken.

The figures shown within square brackets after the title of inventions indicate their classification index at acceptance.

Typed copies of the specification which are to open to public inspection can be supplied by the Patent Office on payment of the prescribed charges which may be ascertained on application to the office.

401/2005	Otsuka Pharmaceutical Co., Limited, Japan	“A solid pharmaceutical formulation comprising cilostazole “ A61K 9/36
----------	--	--

140102

This invention provides a solid pharmaceutical composition having high physical strength and further having excellent drug release properties and digestibility of excipients when administered, which comprises (a) an active medical ingredient and (b) a pre-gelatinized starch in an amount of 10 to 90 % by weight, said pre-gelatinized starch being prepared by pre-gelatinizing a cheap and stable usual starch during the procedure for formulation. This invention also provides a method for preparing the solid pharmaceutical composition.

847/2005	Muhammad Asghar, Rawalpindi, Pakistan	“An automated fluid mixer providing output at controlled temperature” F16K 11/02
----------	---	--

140103

An invention is disclosed (Fig1) which maintains nearly constant outlet temperature when fed from two inlet fluid streams at different temperatures. The outlet fluid temperature is sensed by an enclosed mass of air which

expands as mixed fluid flows in contact with the heat conductive gas enclosure. Expansion of the gas operates a mechanism to affect the mixture ratio sufficiently to maintain a constant outlet temperature.

286/2008 GEOX S.P.A.,
Italy

“Waterproof and vapor-permeable assembly insole and shoe manufactured with such insole”

A43B 7/12

140104

An assembly insole which is impermeable to water and permeable to water vapor, with a structure which comprises a membrane (11) which is impermeable to water and permeable to water vapor and is arranged in an upward region, and a supporting layer (12) which is arranged below the membrane (11), is made of a material which is resistant to hydrolysis and is vapor-permeable or diffusely perforated, and is capable of acting as a support for the foot, as a manufacturing base for the shoe, as an element for protecting the membrane (11) against the penetration of blunt objects, and of withstanding the stresses induced in the shoe during use, the membrane (11) and the supporting layer (12) being mutually joined so as to make, as a whole, said assembly insole impermeable to the passage of water and not compromise the vapor permeability of the membrane (11).
