APPLICATION ACCEPTED

Notice is hereby given that the person interested in opposing the grant of Patents to any of the applications referred to below at any time within four months from the date of this Gazette may give notice at the Patent Office on the prescribed Form P-7 of the Patents Rules 18(1) of 2003.

The six figures number shown in the right hand side are those given to applications on acceptance of the complete specification under which the specification will be printed and subsequent proceeding taken.

The figures shown within square brackets after the title of inventions indicate their classification index at acceptance.

Typed copies of the specification which are to open to public inspection can be supplied by the Patent Office on payment of the prescribed charges which may be ascertained on application to the office.

“A compound comprising a biotin residue having antithrombotic Activity”

A61K 47/48, A61P 9/00, CO7H 15/26

141197

The present invention relates compound of the formula (I)

oligosaccharide-spacer-A (I),

wherein the oligosaccharide is a negatively charged oligosaccharide residue comprising two to twenty five monosaccharide units, the charge being compensated by positively charged counterions, and wherein the oligosaccharide residue is derived from an oligosaccharide which has (AT-III mediated) anti-Xa activity per se;

the spacer is an essentially pharmacologically inactive flexible linking residue having a chain length of 10 to 70 atoms;

A is the residue $-\text{CH}[\text{NH}-\text{SO}_2-\text{R}^1][\text{CO}-\text{NR}^2-\text{CH}(4\text{-benzamidine})-\text{CO}-\text{NR}^3\text{R}^4]$,

wherein R^1 is phenyl, naphthyl, 1,2,3,4-tetrahydronaphthyl, (iso)quinolinyl, tetrahydro(iso)quinolinyl, 3,4-dihydro-1H-isoquinolinyl, chromanyl or the camphor group, which groups may optionally be substituted with one or more substituents selected from (1-8C)alkyl

or

(1-8C)alkoxy; and wherein R^2 and R^3 are independently H or (1-8C)alkyl; R^4 is (1-8C)alkyl or (3-8C)cycloalkyl; or R^3 and R^4 together with the nitrogen atom to which they are bonded are a nonaromatic (4-8)membered ring optionally containing another heteroatom, the ring optionally being substituted with (1-8C)alkyl or SO_2 -(1-8C)alkyl;

wherein the compound of formula I further comprises at least one covalent bond with a biotin residue or an analogue thereof.

The compound of the invention have antithrombotic activity and can be used in treating or preventing thrombosis or other thrombin-related diseases. The antithrombotic activity of the compound of this invention can be neutralized in case of emergency upon administration of avidin, streptavidin and analogues thereof having high biotin affinity.

“Self-diverting acid treatment with formic-acid-free corrosion inhibitor”

C09BK 8/528, C23F 11/04, C23F 11/12

141198

A method of treating a subterranean formation penetrated by a wellbore of a well having iron-containing components is carried out by introducing a treatment fluid into the wellbore of the well. The treatment fluid is formed from an aqueous solution, a mineral acid, a viscoelastic surfactant gelling agent and corrosion inhibitor system containing at least one of an alkyl, alkenyl, alicyclic or aromatic substituted aliphatic ketone and aliphatic or aromatic aldehyde. The treatment fluid is substantially free of any formic acid or precursor formic acid. In certain embodiments, the corrosion inhibitor system comprises a mixture of at least one of an alkenyl phenone or α , β -unsaturated aldehyde, an unsaturated ketone or unsaturated aldehyde other than the alkenyl phenone and α , β -unsaturated aldehyde, a dispersing agent, an extender and an alcohol solvent. A corrosion inhibitor intensifier may also be used in certain embodiments, which may include a mixture of cuprous iodide and cuprous chloride.
